=====

-----

**Version 3.1.3 January.25, 2007**

-----

- Fixed crash caused by importing corrupt DNG files.
- Updated Nikon Libraries for compatibility with Nikon D80/D40.
- Fixed a problem where Nikon raw photos might not orientate correctly.
- Various Vista compatibility updates.
- Fixed issue with some .XMP sidecars not being recognized (Win).
- Fixed problem where preferences might not be displayed correctly (Mac).
- Fixed problem where Shockwave Flash files might not play.
- Fixed a few issues with Batch Rename.
- Various other fixes.

-----

**Version 3.1.2 September.19, 2006**

-----

- Fixed problem where Nikon NEFs might not appear in the list of supported file types (Win).
- Fixed problem where a catalog shared by both Macintosh and Windows versions of iView MediaPro might get corrupted.
- Fixed .WMV and .MPEG thumbnail refresh problem (Win).
- Fixed error notification within XML Export (Win).
- Fixed crashing bug with error log.
- Action log now reports activity for more features of iView MediaPro.
- Added support for cameras in PTP mode (Win).
- Improved Scroll Lock mode in Light Table (Option key resets offsets while scrolling).
- When entering new terms in the Organize panel, terms are now

recorded in the current vocabulary set (Mac).

- Fix issue with display of progress dialog (Win).
- File dates in info panel now adjust to changes in preference of date format.
- Fixed problem with volumes being resolved incorrectly in the Organize panel.
- Changed the Auto-save feature to behave as expected.
- Fixed problem that could cause a crash importing from Camera/Disk (Win).
- Fix issue with long filenames where some thumbnails would not display correctly (Win).
- Added notification if Notepad email feature fails.
- Batch rename now sorts as the view order and appends an incrementing number to the filename if filename clash occurs.
- Disabled sync annotations to MP4 files which corrupted files.
- Fixed issues with XML import/export.
- Fixed cosmetic problems with Intel Mac.
- Fixed Applescript issue with Intel Mac.
- Changed HTML gallery to not save a common title for all galleries.
- Fixed lock file issue that could cause an error on opening a catalog (Mac).
- Fixed issue where adding an annotation in the Organize panel would not update the vocabulary (Mac).
- Fixed various problems with the Image Editor.

---

**Version 3.1.1 [42B6] June.28, 2006**

---

- Fixed sync annotations bug when adding Image resource blocks to JPEG files.
- Fixed scripting issue with custom fields.
- Added favorites support when editing annotations directly in the catalog grid.
- Fixed rare issue with black thumbnails after exiting light table.
- Fixed issue when saving a slide show with individual slides duration set to 0.

---

**Version 3.1 [42B1] June.15, 2006**

---

- Added support for IPTC data during file synchronization.  
The IPTC block is now UTF8 encoded and fully inclusive (i.e it contains ALL iView supported fields).  
Metadata sync now works with NEF, DCR and CR2 files as well as

other popular image formats.

- Major scripting engine update (including improved importers for Adobe Photoshop Elements and Adobe Photoshop Album, Annotation, Files, Tools).
- Added new scripts (Annotate, Files, Tools).
- Added support for multiple progress bars as in Mac version.
- Updated version history log file to be cross platform compatible (should also work between Mac PPC and Mac Intel).
- Updated Japanese language script.
- Added support for ratings and label in Metadata Templates.
- Improved performance when rendering of NEF files.
- Improved toolbar text searching.
- Corrected various UI, performance & optimization issues.
- Corrected issues when updating remote galleries via FTP.
- Corrected issues when packaging documents for email.
- Corrected issues reading certain memory card readers.
- Corrected issues when using the image editor with monitor set to thousands of colors (or less).
- Corrected issues with folder "Reset Paths" and "Auto-Update" features.

-----  
**Version 3.1 [42AB] May.30, 2006**  
-----

- Brand new Notepad feature.
- Universal Binary compatible (Mac).
- Added asynchronous toolbar text search.
- Added feature to automatically extend last defined thumbnail view field if space is available during printing. Field must be more than 1 line high.
- Added feature to import/export labels in XML file.
- Added Finder labeling in folder panel (Mac).  
Folders are now displayed using user icons and labels as displayed in Finder.  
Pressing keys 1 to 7 will set the label for selected folders.  
Pressing key 0 will remove the label for selected folders.
- Included some useful new scripts.
  
- General Mac & Windows UI optimization and stability issues.
- Improved reliability of folder manager in organize panel.
- LightBox feature renamed to Light Table (for trademark reasons) now supports up to 6 images at once.
- Incremental downloads (Camera/Disk/URL) now always start with a valid increment (Mac).
- Corrected 'manage color profiles' issues with list of available color profiles (Win).
- Corrected issue when applying metadata templates to newly

imported items.

- Corrected issues when importing/exporting XML for catalogs containing user defined fields.
- Corrected issue with color levels editing dialog (Win).
- Corrected issues when saving one or more files in batch edit mode (Win).
- Corrected issue when importing HTML files (Win).
- Corrected issues when creating capture date sets during import.
- Corrected issue with Description field when "Treat captions as raw HTML" in HTML Gallery didn't work.
- Corrected issue with grayscale color matching (Win).
- Corrected issue when Make Contact Sheet would incorrectly calculate layout metrics.
- Corrected script issues, including when importing from iPhoto (Mac) and Photoshop Album (Win).
- Corrected issue with dual monitor slideshow/light table (Win).
- SlideShow
  - Enhanced Slide Show to support more than 32000 items.
  - Respects "always use previews" catalog setting.
  - Improved size and quality of export movies.
  - Fixed multiple monitor positioning (Win).
  - Added page up/down key navigation.
- Metadata synchronization, all non XMP compatible file formats are now tagged using 8BIM:1060 resource (Mac).
- Fixed crashing issue when extracting annotations from m4a media.
- Fixed double rotation issue with ORF files.
- Fixed XMP annotation synchronization issues.
- Fixed long standing bug where some thumbnails were not build when importing hundreds of DCR files.
- Fixed issue resolving catalog associated folders (download and version control) when sharing catalogs between Mac and Windows environments.
  
- Ghostscript for Mac no longer supported.
- Minimum Mac OS support 10.3.9

-----  
**Version 3.0.2 [429A] Feb.23, 2006**  
-----

- Improved support for XMP.
- Improved support for JPEG 2000 image files.
- Improved custom file info panel for Adobe Photoshop CS2.
- Fixed several issues with vocabulary editor [WIN].
- Fixed issue with catalog finder [WIN].
- Fixed issue when closing catalogs [WIN].
- Fixed issue in XMP templates containing dates or custom fields

[WIN].

- Fixed issue where applying label or rating would discard uncommitted annotations.

---

**Version 3.0.2 [4297] Feb.6, 2006**

---

- Added support for Panasonic/Leica Digilux RAW (via DCRAW).
- Added support for Sinar/Mamiya (preview only).
- Fixed issue with search box.
- Fixed issue with path resolver of catalogs created on the Mac [WIN].
- Fixed issue when closing catalogs [WIN].
- Fixed issue when saving find queries [WIN].

---

**Version 3.0.2 [4293] Jan.27, 2006**

---

- Fixed issue with import using QuickTime 7.0.4 [WIN].
- Major optimizations on catalog with 40K+ records.
- Fixed rare issue when synchronizing JPEG/Photoshop files that contain corrupt IPTC resource blocks.
- Fixed issue sync-out issue with old PSD files that do not contain XMP structure.
- Fixed file type issue when importing certain file formats.
- 'XML Data file' exports now only visible items & fixed bug related to export of catalog sets.
- Fixed issue with word-wrapping in slide show description/captions.
- General optimization on large catalogs.
- Japanese localization.
- Fixed issue with ratings not displayed properly in the organize panel [WIN].
- Fixed several UI glitches in info panel [WIN].
- Fixed shortcut key for ratings [WIN].
- Fixed "Make caption from Photo Data" script [WIN].
- Fixed minor bug with new metadata templates [WIN].

---

**Version 3.0.1 [428F] Jan.5, 2006**

---

- Improved display performance of organize panel [WIN].
- Allowed Batch Rename to operate on a single file [WIN].
- Fixed crashing issue with RedEye filter for batch [WIN].

---

**Version 3.0.1 [428E] Dec.22, 2005**

- 
- Added full import/export metadata support for JPEG 2000 image files.
  - Added color profile support for JPEG 2000 image files.
  - Added scripting support for XML export features.
  - Modified XML export features to create thumbnails as JPEG files.
  - Fixed issues when importing Font media [Mac].
  - Fixed black thumbnails and rendering crashes [Win].
  - Fixed issue where paste into Find dialog was not detected [Mac].
